Learn ಕನ್ನಡ(Kannada) interactively with Sounds By Vedavyasa Rao

By Vedavyasa Rao

Introduction

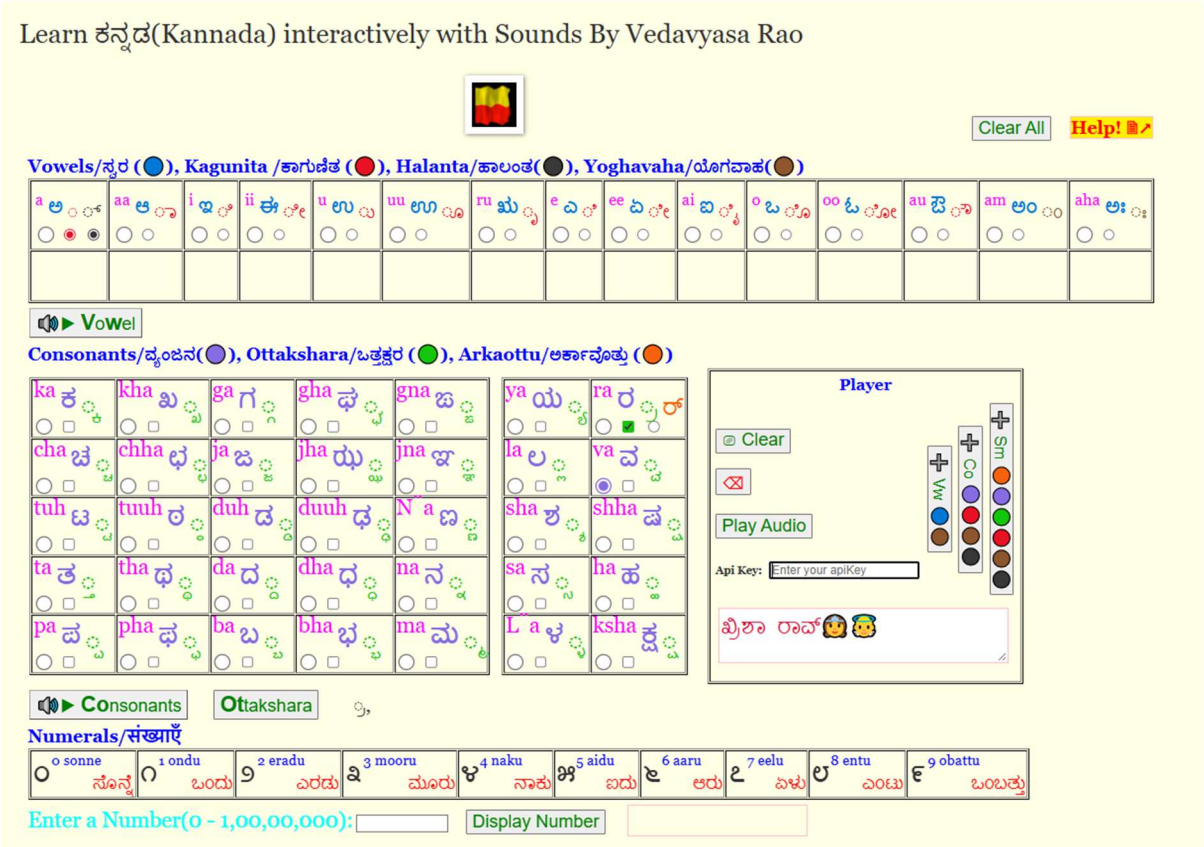

This tool is designed for the audience such as school going kids or adults interested in learning Kannada language by forming words and later hearing the sounds of the words. The sounds are provided by the courtesy of Sarvam Text to Speech Synthesizers.

The tool comes with preloaded sounds for vowels and consonants with Kagunita. These are again generated by the courtesy of Googles Text to Speech Synthesizers.

The preloaded sound files are stored and streamed by courtesy of GitHub.

The tool itself is a single HTML page with JavaScript code driving it. Crucial parts of the JavaScript code is generated by the courtesy of Gemini ai.

Troubleshooting and workarounds

Preloaded Sounds

Sometimes the Audio files don't get loaded for streaming. In such cases, the Vowel or Consonants button background color becomes red as shown below.

First make sure radio button selections are made to play sounds.

You can retry by clicking on the red button several times till it becomes green when reloading becoming successful.

If it still stays red, reload the page in the browser.

If it still stays red, you can continue and use player for sounds.
